Sveriges lantbruksuniversitet
Swedish University of Agricultural Sciences

Syllabus

BIo677.1 Biology and Biotechnology in Forest Production Systems, 15.0 credits

Biologi och bioteknik för skogliga produktionssystem

The course is given as course independent of study programme

Syllabus discontinued 15 April 2009

Version 1 in Slukurs. Corresponds to version 1 in Ladok

Syllabus approved

25 October 2006

The version applies to students admitted from spring 2008 to spring 2008

The version is not a module version

Advanced study in the main field

Grading scale

Pass / Failed

The requirements for attaining different grades are described in the course assessment criteria which are contained in a supplement to the course syllabus. Current information on assessment criteria shall be made available at the start of the course.

Language

English

Prior knowledge

BSc degree in Biology with 60 credits in Biology including 7.5 credits in Cell biology and 15 credits Chemistry, or the equivalent.

Objectives

After the course the student will
• have knowledge of advanced theory concerning the biology underlying the optimal production of forest biomass and optimal wood and fiber properties
• have advanced knowledge of the theory of forest biotechnology, the scope for its use within forest production systems, wood properties and uses of the raw material
• have knowledge of experimental technology used in production research and wood and fiber analyses
• be able to independently perform, summarize and present experiments
• be able to understand, evaluate and discuss novel discoveries from reading scientific papers
• be able to synthesize knowledge within a research area, and transmit this knowledge in an oral presentation

Content

The course includes theory, laboratory exercises and project work. It starts with basic theory underlying the optimization of forest production systems and forest biotechnology in terms of increasing raw material production and promoting desirable wood and fiber properties. The theory covers aspects such as growth optimization, wood formation, biosynthesis of cellulose, hemicellulose and lignin, wood/fiber structure and chemistry. The course highlights several important processes in forest production systems such as somatic embrogynesis plant production and growth optimization in plantation forestry.

Implementation

Timetabled activities:
Lectures ca. 70 hrs
Laboratory experiments and project work ca. 80 hrs (compulsory)

Student seminars ca. 10 hrs (compulsory)
Literature discussions ca. 15 hrs (compulsory)
Workshops ca. 30 hrs
Examination ca. 5 hrs
Non-timetabled group activities:
Writing reports ca. 60 hrs
Exercises ca. 20 hrs
Self-directed studies:
Literature studies ca. 90 hrs
Seminar preparation ca. 20 hrs
Total ca. 400 hrs

Examination

Requirements for examination

Assessment is based on performance in the written examination, and presentation of the laboratory work and seminar.

Successful completion of the course requires: a pass in the examination, satisfactory appraisals of the presentations and participation in compulsory activities.

- If the student fails a test, the examiner may give the student a supplementary assignment, provided this is possible and there is reason to do so.
- If the student has been granted special educational support because of a disability, the examiner has the right to offer the student an adapted test, or provide an alternative assessment.
- If changes are made to this course syllabus, or if the course is closed, SLU shall decide on transitional rules for examination of students admitted under this syllabus but who have not yet passed the course.
- For the examination of a degree project (independent project), the examiner may also allow the student to add supplemental information after the deadline. For more information on this, please refer to the regulations for education at Bachelor's and Master's level.

Additional information

On request, exchange students will be graded according to the ECTS scale.

- The right to take part in teaching and/or supervision only applies to the course date to which the student has been admitted and registered on.

- If there are special reasons, the student may take part in course components that require compulsory attendance at a later date. For more information on this, please refer to the regulations for education at Bachelor's and Master's level.

Responsible department

Department of Forest Genetics and Plant Physiology

Supplementary Information

Finalized by: Programkommitté skog och mark
Biology Area: Botany
Replacement course: BI0653
