Board responsible:

Programnämnden för utbildning inom skog (PN - S)

PRIOR KNOWLEDGE AND OTHER ENTRY REQUIREMENTS

To be admitted to the programme Forest and Landscape (BSc), the following requirements apply:

General entry requirements for first-cycle studies and

- Mathematics 2a or Mathematics 2b or Mathematics 2c
- Science Studies 2*
- Social Studies 1b or Social Studies 1a1 + 1a2

* Biology 1 + Physics 1a (or Physics 1b1 + 1b2) + Chemistry 1 replace Natural Studies 2

or

- Mathematics B
- Science Studies B*
- Social Studies A

* Biology A + Chemistry A + Physics A replace Natural Studies B

(Field-specific entry requirements A14/15).

In addition, English B or equivalent is required. As the language of instruction is English, the Swedish language general entry requirement may not apply.

The specific entry requirements can also be met by those who have obtained equivalent knowledge from the current or a former Swedish national curriculum. The requirements are also fulfilled if equivalent knowledge has been obtained by other means.

For admission to the courses included in the programme, there are specific entry requirements for each course; these are described in the course syllabus.

INTENDED LEARNING OUTCOMES

General objectives

The general objectives for first- and second-cycle courses and programmes are specified in the Swedish Higher Education Act (Chapter 1, Sections 8–9).

Objectives for a Degree in XX

In accordance with the appendix to the Ordinance for the Swedish University of Agricultural Sciences, for a Degree of Bachelor, the student must fulfil the following objectives:

Knowledge and understanding

For a Degree of Bachelor the student shall have:

- demonstrated knowledge and understanding in the main field of study, including knowledge of the disciplinary foundation of the field, understanding of applicable methodologies in the field, specialised study in some aspect of the field as well as awareness of current research issues.

Competence and skills

For a Degree of Bachelor the student shall have:

- demonstrated the ability to search for, gather, evaluate and critically interpret

relevant information for a formulated problem and also discuss phenomena, issues and situations critically

- demonstrated the ability to identify, formulate and solve problems autonomously and to complete tasks within predetermined time frames
- demonstrated the ability to present and discuss information, problems and solutions in speech and writing and in dialogue with different audiences, and
- demonstrated the skills required to work autonomously in the main field of study.

Judgement and approach

For a Degree of Bachelor the student shall have:

- demonstrated the ability to make assessments in the main field of study informed by relevant disciplinary, social and ethical issues
- demonstrated insight into the role of knowledge in society and the responsibility of the individual for how it is used, and
- demonstrated the ability to identify the need for further knowledge and ongoing learning.

DEGREE

Degree awarded on completion of the programme

The programme Forest and Landscape (BSc) leads to a Degree of Bachelor of Science, which is a general qualification. Other general qualifications may be awarded, provided that the requirements for them are fulfilled (see SLU's system of qualifications), further information is available under Additional information, Possibilities for further study.

Students who fulfil the qualification requirements for a Degree of Bachelor will, upon request, be issued a degree certificate. The degree certificate will specify the qualification as Degree of Bachelor of Science with a Major in Landscape Architecture or Degree of Bachelor of Science with a Major in Forestry Science.

Degree requirements

A Degree of Bachelor of Science with a Major in Landscape Architecture is awarded to students who have successfully completed the qualification requirements of 180 credits, of which at least 90 credits according to the following:

- a minimum of 60 credits within the main field of study landscape architecture (G1N, G1F)
- a minimum of 15 credits from courses of specialised study within the main field of study landscape architecture (G2F)
- a minimum of 15 credits from a degree project within the main field of study landscape architecture (Bachelor's degree project, G2E).

A Degree of Bachelor with a Major in Forestry Science is awarded to students who have successfully completed the qualification requirements of 180 credits, of which at least 90 credits according to the following:

- a minimum of 60 credits within the main field of study forestry science (G1N, G1F)
- a minimum of 15 credits from courses of specialised study within the main field of study forestry science (G2F)
- a minimum of 15 credits from a degree project within the main field of study forestry science (Bachelor's degree project, G2E).

G1N and G1F first-cycle courses can be replaced by G1E and G2F first-cycle courses. Courses at first-cycle level can be replaced by courses at second-cycle level, however second-cycle courses may constitute a maximum of 30 credits.

CONTENT AND OUTLINE

Programme description

Students on the BSc in Forest and Landscape have the opportunity to acquire the knowledge needed to understand, explain and manage landscapes in urban and rural environments, with a particular focus on the forest landscape from an international perspective. The way the programme combines knowledge from two central fields at SLU, forestry science and landscape architecture, makes it unique. The programme combines perspectives on the environment and economics, use and management, and urban and rural areas, and includes forestry issues, management, communication and environmental psychology. Students who successfully complete the programme can continue their studies at the Master's level or seek employment at public authorities, as municipality forest managers, in the forestry sector or in nature tourism.

The programme has three parts. The introductory part provides basic knowledge. The middle part has topical courses in silviculture, ecology and biology. During the last part, focus shifts towards management of forests or other landscape types, depending on the choice of field specialisation. The forestry specialisation covers silviculture, forestry planning, forest economics, conservation biology, forest technology and natural resource policy. The landscape architecture specialisation covers landscape design, management of peri-urban forests, environmental psychology and landscape analysis. Students can choose one of the main fields of study, landscape architecture or forestry science, for their degree project.

General competencies are integrated in subject courses. Cooperation and oral and written communication skills are practised and developed in dialogue with various

groups throughout the programme. The ability to critically and systematically integrate knowledge, as well as a scientific approach, are key components in subject-matter progression. Students practise scientific methods through the use of SLU's broad research in lectures and supervision. Through study visits, guest lecturers and business- and industry-oriented projects, studies are tied in with professional life, business and industry and the surrounding society. The degree project offers students the option of specialising in a particular subject by applying their knowledge, skills and approach in their chosen main field of study.

Students can opt to take courses outside the proposed schedule, at SLU or another university in Sweden or abroad. There are good opportunities for exchange studies at one of SLU's partner universities such as Wageningen University and Research (WUR) in the Netherlands. WUR offers courses in forest governance, i.e. forest management with a social sciences profile. This concept concerns public and private actors jointly deciding on and carrying out management, use and conservation of forest resources.

The programme is taught in English. This, together with the content and perspective of individual courses, contributes to internationalisation at home.

SLU actively promotes a healthy work and study environment and equal opportunities. SLU's profile is focused on knowledge of biological natural resources, and challenges to society such as the supply of raw materials, water and energy, and climate change etc. and are linked to our areas of responsibility. These challenges, and humankind's use and management of biological natural resources, are also the subject of the UN goals for sustainable development.

Courses in the programme

Main field of study

Landscape architecture (LK)

Forestry science (SV)

Courses (preliminary course titles), Main field of study - Specialisation

Year 1

Trees, structure and function, 15 hp, BI/SV, G1N

Analysis of forested landscapes, 15 hp, LK, G1N

Forest and landscape ecology, 15 hp, BI/SV, G1N

Forest management methods, 15 hp, SV, G1F

Year 2

Vegetation design, 7,5 hp, LK, G1N

Tree health and genetics, 7,5 hp, SV, G1N
 Forest and landscape governance, 7,5 hp, SV/LK, G1F
 Management tools, 7,5 hp, SV/LK, G1F
 Conflict resolution and environmental communication, 15 hp, LK, G1F
 Forest and landscape management strategies, 15 hp, SV/LK, G1F

Year 3

Forest management under global change, 15 hp, SV/LK, G1F
 Nature conservation under global change, 15 hp, SV/LK, G2F
 Ecosystem services and functions under global change, 15 hp, SV/LK, G2F
 Bachelor thesis in Forestry Science, 15 hp, SV, G2E
 Bachelor thesis in Landscape Architecture, 15 hp, LK, G2E

The courses offered may change during the programme. Decisions on the courses offered are taken well in advance of the next academic year.

For each course in the programme, there is a course syllabus describing its content and other specifics. Detailed information on when the courses are offered is available in the course schedule on the SLU student web.

OTHER INFORMATION

General regulations for first- and second-cycle courses and programmes

For more information on semester dates, examination and credit transfer, see the Regulations for education at Bachelor's and Master's level available on the SLU student web.

Possibilities for further studies

Students who complete the BSc in Forest and Landscape and are awarded a degree have the opportunity to continue their studies at second-cycle level. The programme contains courses which, if combined with studies at second-cycle level, may enable students to fulfil the requirements for the professional qualification Degree of Master of Science in Forestry, 300 credits. The objectives for the professional qualification Degree of Master of Science in Forestry are specified in the appendix to the Ordinance for the Swedish University of Agricultural Sciences. The requirements for the professional qualification Degree of Master of Science in Forestry are defined in SLU's degree requirements for first cycle and second cycle level.
